Table:	users

The users table holds data of registered users for authentication during existing users' logins, password change and new users' registration.

Column	Data type	Description
user_id	int(11)	Primary key for users table. It auto increments everytime a new addition to the database is made. Serves as a unique key for each user for future usage.
first_name	varchar(255)	First name of registered users
last_name	varchar(255)	Last name of registered users
email	varchar(255)	Email address of registered users. Used for authentication during login stage.
password	varchar(255)	Encryted password of registered users. Used for authentication during login and password change stages.
register_at	timestamp	The time and date when users first register.
